

Lab Assignment 02

Inspiring Excellence

Course Code:	CSE111
Course Title:	Programming Language II
Topic:	OOP Basics, Instance Variable and Instance Method
Number of Tasks:	12 (Classwork: 06, Homework: 06)

[Submit all the Coding Tasks (Homework: Task 1 to 4) in the Google Form shared on buX before the next lab. Submit the Tracing Tasks (Homework: Task 5 to 6) handwritten to your Lab Instructors at the beginning of the lab]

[You are not allowed to change the driver codes of any of the tasks]

CLASSWORK

Task 1

You are given the following “**University**” class:

```
public class University{  
    public String name;  
    public String country;  
}
```

Now write a Java **tester** class named “**UniversityTester**”.

- a. Write the main method and create 2 objects of **University** class and print the location of the objects and print the instance variables of the objects. Are the location of the objects the same?
- b. Now change the instance variables of the first object.
 name = “Imperial College London”
 country = “England”

Now change the instance variables of the second object.
name = “BRAC University”
country = “Bangladesh”

Now check if the instance variables of both objects have changed or not and whether the instance variables of both objects are of the same value or not.

Task 2

Complete the “Cat” class so the main method produces the following output:

Test Class	Output
<pre>public class Test7{ public static void main(String [] args){ Cat c1 = new Cat(); System.out.println("1====="); c1.printCat(); c1.color = "Black"; System.out.println("2====="); c1.printCat(); c1.color = "Brown"; c1.action = "jumping"; System.out.println("3====="); c1.printCat(); } }</pre>	<pre>1===== White cat is sitting 2===== Black cat is sitting 3===== Brown cat is jumping</pre>

Task 3

Design the **Course** class to generate the correct output from the driver code provided below:

Driver Code	Output
<pre>public class Tester3{ public static void main(String[] args) { Course c1 = new Course(); Course c2 = new Course(); c1.updateDetails("Programming Language I","CSE110", 3); System.out.println("===== 1 ====="); c1.displayCourse(); c2.updateDetails("Data Structures","CSE220", 3); System.out.println("===== 2 ====="); c2.displayCourse(); c1.updateDetails("Programming Language II","CSE111", 3); System.out.println("===== 3 ====="); c1.displayCourse(); } }</pre>	<pre>===== 1 ===== Course Name: Programming Language I Course Code: CSE110 Course Credit: 3 ===== 2 ===== Course Name: Data Structures Course Code: CSE220 Course Credit: 3 ===== 3 ===== Course Name: Programming Language II Course Code: CSE111 Course Credit: 3</pre>

Task 4

Design the **CellPhone** class so that the **main** method of tester class can produce the following output:

Tester Class	Output
<pre>public class Tester4{ public static void main(String[]args){ CellPhone phone1 = new CellPhone(); phone1.printDetails(); phone1.model ="Nokia 1100"; System.out.println("1#####"); phone1.storeContact("Joy - 01834"); System.out.println("====="); phone1.printDetails(); System.out.println("2#####"); phone1.storeContact("Toya - 01334"); phone1.storeContact("Aayan - 01135"); System.out.println("====="); phone1.printDetails(); System.out.println("3#####"); phone1.storeContact("Sani - 01441"); System.out.println("====="); phone1.printDetails(); } }</pre>	<pre>Phone Model unknown Contacts Stored 0 1##### Contact Stored ===== Phone Model Nokia 1100 Contacts Stored 1 Stored Contacts: Joy - 01834 2##### Contact Stored Contact Stored ===== Phone Model Nokia 1100 Contacts Stored 3 Stored Contacts: Joy - 01834 Toya - 01334 Aayan - 01135 3##### Memory full. New contact can't be stored. ===== Phone Model Nokia 1100 Contacts Stored 3 Stored Contacts: Joy - 01834 Toya - 01334 Aayan - 01135</pre>
